This sequence encodes human TNF-alpha 55kD receptor . A placenta cDNA library in gt10 was screened with probe AAQ29236. Ten hybridising clones were plaque purified and cDNA size determined by PAGE against an Eco RI digested phage DNA. The inserts of two cDNA clones were then sequenced. The coding region of the majority of the human TNF-alpha
                       comprises
                                                                                                                                                                   tumour necrosis factor alpha; extracellular binding domain;
treatment; pulmonary diseases; septic shock; HIV infection;
malaria; viral meningits; graft versus host disease;
autolimmune disease; rheumatoid arthritis.
                                                      New polypeptide capable of binding human TNF alpha - compri-
first three cysteine-rich subdomains of TNF alpha receptor
treating autoimmune disease, septic shock, HIV etc.

                                                                                                                                         55kD receptor was isolated as an ECORI fragment encoding 374 amino acids, and cloned into a mammalian cell expression vector, resulting in prinkr. A derivative of the TNF-alpha receptor was produced by domain. PCR with primers AQQ9237,8 generated a 300pp restriction fragment which was cloned into prinkr, giving prinked by DNA sequencing confirmed this contained the designed DNA sequence. The TNF-alpha receptor expression plasmids were then transfected into monkey COS-7 cells.

The present invention relates to Tumour Necrosis Factor (TNF) inhibitors (see AAB37676 and AAB37685), which have TNF inhibitory activity. The novel TNF inhibitors of the present invention are useful as therapeutic for treating inflammatory and degenerative diseases mediated by TNF. I), and present sequence is the coding sequence for the precursor of 30 kDa TNF inhibitor. The 30 kDa TNF inhibitor can inhibit TNF alpha. Example 6; Fig 21; 82pp; English.

                                                                                                                                                                                                                                                                                                                         This invention describes novel homogeneous insoluble proteins (I), their (in)soluble fragments (Ia) and their salts that can bind tumour necrosis factor (TNF). The products of the invention have anti-inflammatory and antimalarial activity. (I) and (Ia) are used (i) to treat diseases in which TNF is involved (e.g. septic shock, autoimmune glomerulonephritis, cerebral malaria, immune responses and inflammation), (Ii) to purify TNF, (iii) to ldentify TNF (ant)agonists and (IV) for diagnostic determination of TNF in body fluids. Antibodies raised against (I) are used for affinity purification of (I). This sequence encodes a tumour necrosis factor binding protein described in the method of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   366

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This invention describes novel insoluble proteins (1), also their (in) soluble fragments and pharmaceutically acceptable salts, able to bind tumor necrosis factor (TME) and in homogeneous form. The products of the invention have antiinflammatory, immunosuppressive, antibacterial, to treat diseases mediated by TNF, e.g. shock in cases of meningococcal activity. (1), and related recombinant proteins, are used to treat diseases mediated by TNF, e.g. shock in cases of meningococcal malaria. Also (1), or antibodies specific for them, are used for diseases. TNF in body fluids, for affinity purification of TNF and for identifying (ant) agonists of TNF. This sequence encodes a human TNF binding protein described in the method of the invention.

          The invention relates to detecting (MI) granulocyte (GC) activation (GCA), by detecting the level of expression of gene(s) (Gs) identified by DNA chip analysis as given in the specification, and comparing the expression level to an expression level in an unactivated GC, where differential expression of Gs is indicative of GCA. Also included are modulating (M2) GA by contacting GC with an agent that alters the expression of at least one gene in Gs; (2) screening (M3) for an agent capable of modulating GCA or an inflammation (especially chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease using the

control of the tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease, by detecting the subject to apathogen or sterile inflammatory disease, by detecting the level of expression in a sample of the tissue of gene(s) from Gs, where the level of expression of the gene is indicative of inflammation; where the level of expression of the gene is indicative of inflammation.

CC (4) treating (MS) an inflammation (especially chronic) or in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease, by contacting a tissue having inflammation with an agent that modulates the expression of gene(s) from GS in the tissue. MI is useful for detecting GA; MS is useful for contacting an inflammation in a tissue; M4 is useful for modulating GA; MS is useful for screening an inflammation (especially chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease (e.g. psoriasis, rheumatoid arthritis, arbina; creperfusion injury, ARDS, adult respiratory distress syndrome, creperfusion injury, ARDS, adult respiratory distress syndrome, inflammatory bowel disease, crohn's disease, ulcerative colitis, periodontal disease; also bacterial infection, viral infection, protozoal infection, fungal infection and MS is useful for treating one of the above conditions. The present consecuted and for a protozoal infection, fungal infection for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

The invention relates to a novel method for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma or metastatic liver tumour in a patient, and differentiating metastatic liver cancer from hepatocellular carcinoma in a patient, involving detecting the level of expression of two or more genes represented in ABN93303-ABN97455 in a cytostatic attivity. The method is useful for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma and metastatic cytostatic activity. The method is useful diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma and metastatic carcinoma in a patient. The method is useful diagnostic markers as well as markers that can be used to monitor disease states, disease progression, of markers that can be used to monitor disease states, disease progression, of the sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO

The invention provides antisense compounds targeted to human tumour necrosis factor receptor type 1 (TNRT1) RNA. These antisense compounds can be used in a method of inhibiting the expression of INFR1 human cells or tissues. The antisense compounds specifically hybridize with one-or more nucleic acids encoding INFR1 modulating the function of nucleic acid molecules encoding INFR1, ultimately modulating the amount of INFR1 produced. The antisense compounds and method are useful as research reagents and diagnostics, and in the treatment and prophylaxis of infection, inflammation or tumour formation. The present sequence represents the nucleotide sequence of human INFR1 (GenBank Accn No: X55313).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          435

This invention relates to a novel method for enhanced killing of tumour cells comprising contacting a tumour cell with a synergistic condination of a death domain receptor ligand and a diterpenoid triepoxide. This method has cytostatic activity and works by blocking triepoxide. This method has cytostatic activity and works by blocking two for TNF-alpha mediated induction of C-TAP2 and c-TAP1. The method of the invention may be used for treating tumours, particularly solid tumours, c. arctinoma, mammary adenocarchoma and non-small cell lung carcinoma also neurological malignancies, non-Hodgkin's lymphoma, chronic lymphocytic leukaemia, malignant cutaneous T-cells, my grossis fungoides, non-MF cutaneous T-cell lymphoma, lymphomatoid papulosis, T-cell rich cutaneous lymphold hyperplasis, bullous pemphigoid, discoid lupus erythematosus, lichen planus. The combination may be administered with other active agents, e.g. antimetastatic, anti-tumour or anti-angiogenic agents. The potent synergy between the diterpenoids and the death domain ligands allows increased resistant cells. This sequence ropresents the human tumour necrosis factor alpha receptor (TNF-R1) DNA. TNF-R1 is a death domain receptor cueed in the used method of the invention in combination with diterpenoid triep appearance or combination or and combination of combination or combination and combination or combination and combination or combination and combination or combination and combination with diterpenoid
                                                                                                                                                                             diterpendid triapoxide; oytostatic activity; c-IAPJ; c-IAPJ; c-Cardinoms, mammary adenocarcinoms, non-small cell lung carcinoms, neurological malignancy; lichem planus; non-Bodgkin's lymphoms; chronic lymphocytic leukaemia; anti-angiogenic; malignant cutaneous T-cell; lymphomatoid papulosis; anti-metastatic; non-NF cutaneous T-cell; lymphoma; mycosis fungoides; anti-tumour; T-cell rich cutaneous lymphoid hyperplasia; bullous pemphigoid; discoid lupus erythematosus; human; gene; receptor; TNF-RI.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Use of a synergistic combination of death domain receptor ligands and diterpenoid triepoxides for killing of tumour cells
                                                                                                                                                                      receptor 11gand;

Expression of this receptor is regulated by shedding of the extracellular receptor fragment. The p55 TNF-R can be shed in response to different inducing agents, e.g. phorabol myristate accetate (PMA).

C depending on cell type. The only region of the receptor whose structure affects the shedding response is the spacer region (see AAR75012) in the extracellular domain. This region is located close to a site of cleavage of the molecule, and links the Cys rich module to the transmembrane confiners between human p55 TNF-R and murine epidermal growth factor receptor (BGF-R) that are represented by AAR75007-11. This spacer region was subjected to deletion mutations (AAR75013-25) and substitutions (AAR75056-47). Of the spacer region, the most important residues are can important of these. The shedding of the receptor is independent of the conformation of the protein adversely effect the shedding process. The conformation of the protein adversely effect the shedding process. The from the cell bound TNF-R. Fragments of these inhibitors can be seen in thithier of a protease that is capable of cleaving the soluble TNF-R. ANR75013-4. These protease

                                                                                                                                                                                                                          Partial amino acid sequences were determined for the 55 and 75kD TNF-BPs (see AAR11072.R11081) and oilgonucleotide primers were synthesised based on these partial sequences. The primers were used to produce a cDNA fragment for use as aprobe to screen a human placental cDNA bank constructed in lambda gtll. Positive clones were identified and sequenced. DNA constructs comprising the TNF-BP coding sequence may also contain a fragment encoding a human Ig domain. Recombinant constructs are used to transform cells to confer lamproved TNF-binding properties.
                                                                                                                                                                  Insoluble tumour necrosis factor binding proteins - and DNA encoding them, useful in pharmaceutical prods. and for antibody prodn.

                                                                                                                                                                                                                                                                                                                                                                                         Modification of the tumour necrosis factor receptor by mutation or deletion modulates signal transduction and/or cleavage effected by the receptor. This modulation of activity can also be achieved using effector proteins which interact with the TNF receptor.

Molecules which interact with the TNF receptor or the effector proteins can be used to treat or prevent diseases associated with TNF activity e.g. autoimmume disease; rheumatoid arthritis; graft rejection; graft vs. host disease or septic shock. They can also be used to treat overdoses of exogenous TNF.
                                                                                                                                                                                                                                                                                                                     Modulating activity of tumour necrosis factor receptor - using peptide(s), antibodies, etc. which interact with critical regions of receptor or effector protein, for controlling auto-immune disease, septic shock, etc.
                                                                                                                                       necrosis factor receptor

                                                                                                                                                                                                                                                                                                                                      The Inker may comprise 5-100 amino acids selected from Gly, Asp, Ser, Thr and Ala. These linkers separate the individual moeitles by such a distance that each component of the fusion protien is capable of folding into the secondary or tertiary structure required for its biological activity. These fusion proteins may be used in therapy, diagnosis and assays for conditions mediated by TNF or IL-1, particularly in conditions in which both TNF and IL-1 play a causitive role. They may be used to treat cachexia, rheumatoid arthritis, diabetes, multiple solerosis, pulmonary fibrosis and silicosis, cerebral malaria, allograft and xenograft rejection in graft verses host disease, sepsis, septic shock, inflammation, allergies and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to polymorphic variants of the tumour necrosis factor receptor 1 (TNFR1) gene. The present sequence is the coding sequence of the TNFR1 gene. The sequence of the whole gene is given in AAA5102, AAA55103 and AAA95104. The polymorphisms were identified by amplifying and sequencing regions of the gene. Twelve polymorphic loci were discovered. Of these twelve polymorphisms may be useful for studying the biological function of TNFR1 polymorphisms may be identifying drugs targetling the protein for treatment of disorders related to its abnormal expression or function such as tumours, apoptosis related disorders and bacterial infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ATGGGCCTCTCCACCGTGCCTGACCTGCTGCTGCTGGTGCTGCTCCTGGAGCTGTTGGTG

The present invention relates to Tumour Necrosis Factor (TNF) inhibitors dee AAB37676 and AAB37685), which have Thr Inhibitory activity. The novel TNF inhibitors of the present invention are useful as therapeutic agents for inhibiting the activity of TNF and interleukin (IL-1), and for treating inflammatory and degenerative diseases mediated by TNF. The present sequence is the coding sequence for the precursor of 30 kDa TNF inhibitor. TNF alpha.

The products of the invention have anti-inflammatory and entimalarial activity. (1) and (1a) are used (i) to treat diseases in which TNF is involved (e.g. septic shock, autoimmune glomerulonephritis, cerebral malaria, immune responses and inflammation). (ii) to purify TNF, (iii) to identify TNF (ant)sgonists and (iv) for disquestic determination of TNF in body fluids. Antibodies raised against (1) are used for affinity purification of (1). This sequence encodes a tumour necrosis factor binding protein described in the method of

The products of the invention have antiinflammatory, immunosuppressive, antibacterial, antiprotozoal activity (1), and related recombinant proteins, are used to treat diseases mediated by TNP, e.g. shock in cases of meningococcal sepsis; development of autoimmune glomerulonephritis and cerebral malaria. Also (1), or antibodies specific for them, are used for diagnostic determination of TNF in body fluids, for affinity purification of TNF and for identifying (ant)agonists of TNF. This sequence encodes a human TNF binding protein described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                720
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   906
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        780
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              966
tumour in a patient, and differentiating metastatic liver cancer from hepatocellular carcinoma in a patient, involving detecting the level of expression of two or more genes represented in ABN83503-ABN97455 in a tissue sample. The method of the invention has hepatotropic, and cytostatic activity. The method is useful for diagnossing and detecting the progression of liver cancer, hepatocellular carcinoma and metastatic liver carcinoma in a patient. The method is useful for identifying expression profiles which serve as useful diagnostic markers as well as markers that can be used to monitor disease states, disease progression, entry coxility, drug efficacy and drug metabolism.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.WIPO.Int/pub/published_pct_sequences.

The invention provides antisense compounds targeted to human tumour necrosis factor receptor type I (TNFR1) RNA. These antisense compounds can be used in a method of inhibiting the expression of TNFR1 human cells or tissues. The antisense compounds specifically hybridize with one or more nucleic acids encoding TNFR1 untimately modulating the function of nucleic acid molecules encoding TNFR1 ultimately modulating the amount of TNFR1 produced. The antisense compounds and method are useful as research reagents and diagnostics, and in the treatment and prophylaxis of infection, inflammation or tumour formation. The present sequence tepresents the nucleotide sequence of human TNFR1 (GenBank Accn No: X55313).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  셤
                                                                                                                                                                             This invention relates to a novel method for enhanced killing of tumour cells accomprising contacting a tumour cell with a syncrgistic combination of a death domain receptor ligand and a diterpencial triepoxide. This method has cytostatic activity and works by blocking triepoxide. This method has cytostatic activity and works by blocking TNF-alpha mediated induction of c-IAP2 and c-IAP1. The method of the invention may be used for treating tumours, particularly solid tumours, e.g. carcinoma, mammary adenocarcinoma and non-small cell lung carcinoma also neurological malignancies, haematological malignancies, e.g. non-Hodgkin's lymphoma, chronic lymphocytic leukaemia, malignant cutaneous T-cells, mycosis fungoides, non-Mr cutaneous T-cell lymphoma, bullous pemphigoid, discoid lupus erythematosus, lichen planus. The combination may be administered with other active agents, e.g. antimetastatic, anti-tumour or anti-angiogenic agents. The potent synergy netween the diterpenoids and the death domain ligands allows increased xilling at equivalent or lower doses, and can sensitiae otherwise resistant cells. This sequence represents the human tumour necrosis factor alpha receptor (TNF-RI) DNA. TNF-RI is a death domain receptor used in the used method of the invention in combination with diterpenoid triepoxides to kill tumours by inducing apoptosis.

                                                                                                                                                                                                                                                                                                                 Partial amino acid sequences were determined for the 55 and 75kD TNF-BPB (see AAR11072-R11081) and oligonucleotide primers were synthesised based on these partial sequences. The primers were used to produce a cDNA fragment for use as aprobe to screen a human placental cDNA bank constructed in lambda 9t11. Positive clones were identified and sequenced. DNA constructs comprising the TNF-BP coding sequence may also contain a fragment encoding a human Ig domain. Recombinant constructs are used to transform cells to confer improved TNF-binding properties.

Expression of this receptor is regulated by shedding of the
extracellular receptor fragment. The p55 TNF-R can be shed in response
to different inducing agents, e.g. phorbol myristate accette (PMA),
depending on cell type. The only region of the receptor whose structure
affects the shedding response is the spacer region (see AAR75012) in the
extracellular domain. This region is located close to a site of cleavage
of the molecule, and links the Cys rich module to the transmembrane
continuers between human p55 TNF-R and murfine epidermal growth factor
contempers between human p55 TNF-R and murfine epidermal growth factor
contempers between human p55 TNF-R and murfine epidermal growth factor
contempers between human p55 TNF-R and murfine epidermal growth factor
contempers between human p55 TNF-R and murfine epidermal growth factor
contempers between human p55 TNF-R and murfine substitutions
(AAR75026-47). Of the spacer region, the most important of these.

CR ANT5026-47). Of these residues, with the interpedence of a limited
contempers on the identity of these residues, with alter the
conformation of the protein adversely effect the shedding process. The
murations shown in AAR75013-47 were introduced in order to create an
conformation of a protease that is capable of cleaving the soluble TNF-R
from the cell bound TNF-R.
conformation of a protease that is capable of cleaving the soluble TNF-R
from the cell bound TNF-R.
conformation of the protein margines and protease
conformation with the transmembranes of these inhibitors can be seen in
                                                                               p55; tumour necrosis factor receptor; TNF-R; human; murine; chimera; epidermal growth factor receptor; EGF-R; protease; inhibitor; phorbol myristate acetate; PMA; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New protease capable of cleaving soluble tumour necrosis factor (TNP) receptor - from cell-bound TNF- receptor, useful for antagonising deleterious effects of TNF.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    DB 16; Length 2175,

This sequence encodes human TNF-alpha 55kD receptor . A placenta cDNA library in gt10 was screened with probe AAQ29236. Ten hybridising clones were plaque purlified and cDNA size determined by PAGE against an ECO RI digested phage DNA. The liserts of two cDNA clones were then sequenced. The coding region of the majority of the human TNF-alpha scquenced. The coding region of the majority of the human TNF-alpha action, and cloned into a mammalian cell expression vector, resulting in prTNRR. A derivative of the TNF-alpha receptor was produced by engineering a termination codon just prior to the transmembrane engineering a termination codon just prior to the transmembrane restriction fragment which was cloned into prTNRR, giving pTNFRecd. DNA sequencing confirmed this contained the designed DNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   155 ArgGCCCrCrCcACCGrGCCrGACCrGCrGCrGCrGGrGCrCcrGGAGCrGrrGrG 214

The Tumour Necrosis Factor Binding Protein I is the soluble form of type I TNF-receptor and constitutes a fragment of the cell surface form of this receptor, corresp. to its extracellular domain. There is no characteristic poly(A) addition signal near the 3' end of the cDNA. The sequence ACTAAA (tag m) may serve as an alternative to this signal, but with low efficiency. See also AAQ1212-15.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Recombinant tumour necrosis factor binding protein I - prepd. by transfecting eukaryotic cells with vector contg. deoxyribonucleic acid encoding human type T TNF receptor or soluble domain

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
